How can PGX / NGX testing assist in my patient outcomes?

Every patient is biologically unique, and PGX (pharmacogenomic) / NGX (nutrigenomic) testing provides insights that will help you develop a more individualized treatment strategy based on the patient's unique biology.

Pharmacogenetic Testing (PGX)

- ♦ The data gleaned helps clinicians evaluate individual genotypes & develop strategies to optimize drug therapies, minimize risk of adverse drug effects, and reduce drug-drug interactions.
- ♦ A unique QR code provided allows for future searching of all updated, FDA-approved drugs.

Nutrigenomic Testing (NGX)

- ♦ **dnaDiet®** assesses several gene variations that impact metabolism, absorption, and storage of fats and carbohydrates. It identifies eating behavior to help understand how your patient's genetic profile affects their response to different, healthy eating plans.
- ♦ **dnaEstrogen®** tests for gene variants that impact how estrogen is metabolized and processed in the body, and if the processing is efficient and healthy. This info may help patients decrease the risk of certain types of cancer and lessen symptoms of reproductive system conditions.
- ♦ **dnaHealth®** is designed to identify any potential lifestyle diseases and conditions and deliver personalized lifestyle and nutrition recommendations your patients need for good health, longevity and disease risk mitigation.
- ♦ **dnaMind®** examines genetic variations involved in vital biological processes that contribute to the risk of developing mental health disorders. This information provides insight into disease prevention, diagnosis, and treatment.
- ♦ **dnaSkin®** gives you information to improve the visual signs of aging by focusing on interventions specific to your unique DNA. All the genetic variants analyzed in the DNA Skin test are modifiable through appropriate environmental interventions.
- ♦ **dnaSport®** can help personalize a training strategy that defines the right lifestyle, nutrition, and environmental interactions so you can capitalize on your genetic potential.

Laboratory Credentials

- ♦ Genesis Regenerative is partnered with Resolve MDx™ & Resolve Health, a leading molecular diagnostic company that is dedicated to providing healthcare professionals with precise, timely genetics data.
- ♦ Resolve is headquartered in Franklin, TN, and is a CLIA / CAP certified molecular lab.
